## TEETH WHITENING SYSTEM™

A **NEW** Concept for Professional Teeth Whitening  
Using Blue LED, Light Emitting Diode

How does the **BriteWhite Teeth Whitening System** work? The LED Light Emitting Diode system is inserted "inside your mouth" for the ultimate in professional teeth whitening. **BriteWhite** treats all of the teeth (front, back and gums). Results for whitening teeth are obtained by attacking the discoloration of the teeth. A specially tailored gel, a specific wavelength and power are combined to boost the delivery of the light to all your teeth.

**Why let us use the BriteWhite System for whitening your teeth?**

There is:  
No Sensitivity  
No Gagging  
No Long Waiting  
No Saliva Drips  
No Rubber Dams  
No Check Retractors  
No Goggles  
4 to 11 shades lighter in  
less than 20 minutes

*As you can see in the before and after pictures, the BriteWhite Teeth Whitening System really works!*
